

SARI-SARI

Customer Credit Ledger Management System

User Guide

Instructions for store owners and system administrators using the digital customer credit ledger.

Version 1.0 · October 5, 2026

Web application · Desktop and mobile browser

Using this guide

CCLMS keeps customer balances, product credit, payments, and account activity in one store-scoped system. The features available after login depend on your account role.

Role	Available areas
Public visitor	Landing page, login, password recovery
Store owner	Dashboard, customers, products, credit ledger, transaction history, profile
Administrator	Admin dashboard, owner management, login audit, landing-page management

Account access: Owner accounts are created by an administrator. If an account is inactive or you cannot access a role area, contact your system administrator.

Screen capture note

Screenshots in this edition were captured from the local app without signing in. Owner and administrator routes require an authenticated account, and the reset-password screen requires a valid recovery link. Those private/token-gated interfaces are described below but are not represented with fabricated screenshots. The landing-page ledger card contains sample display data.

Contents

- 1. Public landing page and sign-in
- 2. Password recovery
- 3. Store-owner workspace
- 4. Administrator workspace
- 5. Privacy and troubleshooting

Landing page

The landing page introduces CCLMS and provides the route into the system. Select **Log In** in the navigation or main call to action to open the sign-in screen. The sample ledger shown here is illustrative and is not a live store account.

Figure 1. Public landing page with sample ledger, key features, and navigation.

Owner access: If you do not have an account, ask the administrator to create an owner account for your store.

Sign in

← Back to landing page

Welcome!
Please enter your details to sign in.

Figure 2. Sign-in page. The right panel contains Sari-Sari branding.

1. Enter the email address associated with your CCLMS account.
2. Enter your password. Use the eye control to show or hide it.
3. Select **Remember me** only on a device you control.
4. Select **Login**. The system opens the workspace assigned to your account role.

Use **Back to landing page** to return to the public page. If sign-in fails, verify the email/password and ask the administrator to check your account status.

Reset a forgotten password

CUSTOMER CREDIT LEDGER
MANAGEMENT SYSTEM

Figure 3. Password recovery request screen.

1. From sign-in, select **Forgot your password?**
2. Enter the email linked to your account and select **Send reset link**.
3. Check your inbox and spam folder for the recovery email.
4. Open the link promptly. It returns to CCLMS at the reset-password screen.
5. Enter and confirm the new password, then submit the update.

Link not received? Confirm the address and contact the administrator if mail delivery is still unavailable. Recovery links can expire; request another if needed.

The reset-password form only appears after a valid recovery link establishes a Supabase recovery session, so it could not be captured in this unauthenticated guide build.

Owner workspace

Owner screenshots require signing in with an active owner account. The routes below are protected and redirect unauthenticated visitors to Login.

Dashboard • /owner

Review total customers, overall outstanding balance, active customers, active products, customer-status distribution, credit by month, and the ranking of customers with outstanding balances. Use this as the overview before taking ledger actions.

Customers • /owner/customers

- Select **Add New Customer**, enter the customer's name, mobile number, address, and status, then save. The database assigns the customer ID.
- Use the row actions to view or edit customer details and active/inactive status.
- Delete is available only when the customer's calculated balance is exactly zero. Active/inactive status does not determine eligibility.
- Deletion is a soft delete: credit/payment records are retained, and a deletion event is recorded in Transaction History.

Products • /owner/products

- Select **Add New Product**; enter its name, product ID/barcode, and price. An image is optional.
- Select **Scan** to use the device camera, then hold the barcode steady until the same value is confirmed.
- Use the row actions to edit, activate/deactivate, or delete a product. Keep products active if they should be selectable for new credit.

Camera scanning requires browser camera permission and HTTPS, except on localhost. If scanning is unavailable, enter the printed product code manually.

Credit ledger and payments

This protected screen could not be captured without an owner login.

Add credit

1. Open **Credit Ledger** and locate the customer card or table row.
2. Select **Add Credit** for that customer. Inactive customers cannot receive new credit.
3. Choose an active product from the list or use **Scan**. The customer must have at least one active product available.
4. Enter the quantity and review the subtotal.
5. Select **Add Credit** to save. The balance and ledger update after a successful save.

Record a payment

1. Open the customer details from their card or select **View** in table view.
2. Use **Pay Full** to pay the displayed balance, or enter a partial amount and select **Record Payment**.
3. Payments cannot exceed the current outstanding balance. Review the updated balance and payment history after saving.

Use the search box to find a customer by name or ID. The card/table control changes how customers are displayed.

Transaction history

This protected screen could not be captured without an owner login.

- Search by transaction ID, event type, customer, or details.
- Use the date filter to narrow results to a particular day.
- Select **Export Excel** to download the currently filtered records.
- Customer deletion events appear here with the saved customer name and ID. Deleting a customer does not remove earlier financial history.

Profile · /owner/profile

Open the account menu at the bottom of the owner navigation and select **Profile**. Update your profile details, avatar, or password using the forms provided. The account menu also toggles light/dark mode and provides the sign-out action.

Administrator workspace

Admin screenshots require an active administrator account. The routes below are protected and redirect unauthenticated visitors to Login.

Dashboard • /admin

Review owner-account totals and active/inactive account summaries. Use the sidebar to navigate between admin tasks.

Owner Management • /admin/owners

Create and manage store-owner accounts. Verify the account details and status before saving. Deactivating an owner prevents access until the account is reactivated.

Login Audit • /admin/logs

Review administrator login activity and related audit details. Use the available filters and table controls to locate entries.

Landing Page • /admin/landing

Manage the public landing-page content shown to visitors. Save and then open the public page to confirm the published content.

Access control: Admin routes require a signed-in user whose profile role is *admin* and status is *active*. Owner routes require the corresponding active owner role.

Data safety and troubleshooting

- Confirm the customer and product before saving a credit entry or payment.
- Never share your password or recovery link. Sign out on shared devices.
- Keep customer accounts inactive rather than deleting them if a balance remains unsettled.
- If a save fails, read the displayed error and contact the administrator with the message. Do not share passwords, tokens, or SMTP credentials.
- If the dashboard or ledger cannot load, check your connection and account status; the administrator may need to review database permissions.

Role and route reference

Area	Route	Role
Landing page	/	Public
Login / Forgot Password	/login · /forgot-password	Public
Reset Password	/reset-password	Valid recovery session
Dashboard / Credit / Products / Transactions / Customers / Profile	/owner/*	Active owner
Dashboard / Owners / Login Audit / Landing Page	/admin/*	Active admin
